PROFESSIONAL SUMMARY

Strong junior fullstack developer with expertise in C++ and experience in Python. Currently pursuing Computer Science degree at KBTU (2nd year). Demonstrated problem-solving abilities through 100+ LeetCode problems, primarily in C++. Experienced in building web applications, game development, implementing data structures, and working with databases. Passionate about clean code, algorithms, and continuous learning. Seeking remote opportunities to contribute to innovative projects while expanding technical expertise.

EDUCATION

Bachelor of Computer Science
[Kazakhstan-British Technical University \(KBTU\)](#)

2024 - Present

Currently in 2nd year, focusing on algorithms, data structures, software engineering, and web development.

TECHNICAL SKILLS

Languages

C++, Python, JavaScript, HTML, CSS

Backend

Django, Flask, FastAPI, Node.js

Frontend

React, Responsive Design, Vanilla JS

Database

PostgreSQL, SQLite, MongoDB

Tools & Others

Git, Docker, VS Code, Linux, REST APIs

Languages

Kazakh (Native), Russian (Native), English (B2)

PROJECTS

Snake Game

C++, Windows API, Console Graphics

Classic snake game built with C++ using Windows Console API for real-time rendering.

- Implemented game loop with collision detection and score tracking
- Utilized Windows API for console manipulation and smooth rendering
- Applied real-time input handling for responsive gameplay

Data Structures Implementation

C++, Algorithms, OOP

Complete implementations of fundamental data structures from scratch in C++.

- Implemented Linked Lists with insertion, deletion, and traversal operations
- Built Binary Search Trees with search, insert, and balance algorithms
- Demonstrated deep understanding of memory management and pointers

Phonebook Application

Python, PostgreSQL, GUI

Contact management system with full CRUD functionality and database integration.

- Designed and implemented relational database schema for efficient contact storage
- Built intuitive GUI with search and filtering capabilities
- Implemented data persistence and validation logic

Car Racing Game

Python, Pygame, OOP

Interactive racing game featuring physics simulation and real-time rendering.

- Implemented game loop, collision detection, and score tracking system
- Applied object-oriented design patterns for maintainable code structure
- Optimized rendering for smooth 60 FPS gameplay

Paint Application

Python, GUI Frameworks

Graphic editor with drawing tools, color management, and canvas operations.

- Developed event-driven architecture for handling user interactions
- Implemented state management for undo/redo functionality

- Designed user-friendly interface with multiple drawing tools

ACHIEVEMENTS

LeetCode Problem Solving

Solved 100+ algorithmic problems primarily in C++, demonstrating strong foundation in data structures and algorithms. Proficient in solving problems involving arrays, linked lists, trees, graphs, dynamic programming, and more.
